

## HOW DO WE TURN OLD PLASTIC BOTTLES INTO STYLISH SHOPPING BAG?

### IT ALL STARTS WITH PET BOTTLE.

If bottle is just thrown away, it will take around 600 years to biodegrade.

If bottle is thrown into recycle container, it starts new life as new product.

## STORY OF ECOZZ SHOPPER

**01** In your country **PET bottles** are separated by color and then crushed and loaded into containers which are usually empty on their way back to China.

CHINA

**02** In China bottles are shredded into small fragments, paper and other plastics are separated and we will get material called **PET flakes**.

**03** **PET flakes** are used as raw material for products that would otherwise be made from Polyester.

RAW MATERIAL

**04** And here comes the trick. We developed our own fiber called **ecozz rPET** which is soft, durable and can be sublimation printed.

ECOZZ rPET FIBER

**05** Ecozz bag is made of **two types of fabric**. We use **soft 210D rPolyester for body** and **260D rPolyester for handles and zipper reinforcement**. Both fabrics are BPA, Phtalates free.

**06** Once we have rolls of fabric we apply sublimation print with our designer and painter masterpieces. Then we cut the fabric and perfectly stitch it together. We want our bags to be practical and that is why we add zipper too.

**ONE ECOZZ SHOPPING BAG IS MADE FROM 3 PET BOTTLES.**

**MANUFACTURING OF RECYCLED POLYESTER IS ALSO SIGNIFICANTLY FRIENDLIER TO ENVIRONMENT.**

IS USED IN COMPARISON TO STANDARD POLYESTER.

**ONE ECOSHOPPER CAN HOLD AMOUNT OF 2 DISPOSABLE BAGS AND CAN BE USED ALL OVER AND OVER FOR YEARS.**

## DON`T MAKE WASTE, USE ECOZZ
